

# Nucleon and Pion Ioffe time pseudo-distributions

*Friday, August 7, 2020 5:00 PM (20 minutes)*

The light-cone definition of Parton Distribution Functions (PDFs) does not allow for a direct ab initio determination employing methods of Lattice QCD simulations that naturally take place in Euclidean spacetime. In this presentation we focus on pseudo-PDFs where the starting point is the equal time hadronic matrix element with the quark and anti-quark fields separated by a finite distance. We focus on Ioffe-time distributions, which are functions of the Ioffe-time  $v$ , and can be understood as the Fourier transforms of parton distribution functions with respect to the momentum fraction variable  $x$ . We present lattice results for the case of the nucleon and the pion, we discuss several lattice systematics and we also perform a comparison with the pertinent phenomenological determinations
