

# Higher derivative extension of the functional renormalization group

*Wednesday, 8 December 2021 16:40 (20 minutes)*

We study higher derivative extension of the functional renormalization group (FRG). We consider the general form of the FRG equations for a scalar field that include higher functional derivatives with respect to the field. We show that the epsilon expansion around the Wilson-Fisher fixed point is indeed reproduced by the local potential approximation of the general FRG equations.

**Presenter:** Mr TANAKA, Gota (Shizuoka University)

**Session Classification:** Short talk
