

Discussion about NPN2026 white paper

2026/5/26

Title : New Physics Opportunities at Neutrino Facilities

- NPN 2026 workshop, we discuss the present status and future directions of accelerator-based neutrino experiments, including future experimental strategies, facility developments, and the synergies between different accelerator-based neutrino programs, with an emphasis on how they can collectively advance neutrino physics and searches for physics beyond the Standard Model. We also aim to explore the physics landscape beyond the measurement of leptonic CP violation.
- This white paper will summarize the discussions at this workshop, serving as a reference for future planning
 - a short summary of this workshop (e.g. less than 10 pages)

Schedule and note of white paper preparation

- During this workshop : if possible, please provide a short written summary of your talk during this workshop
- June 2026 : draft preparation by white paper preparation committee (LOC + steering members) → also circulate among the speakers
 - Note: please allow us to use figures and other materials from your slides. Please let us know if there are any issues.
- Our goal is to complete by this fall
