

Flavor symmetry and proton decay in high-scale supersymmetry

Keiichi Watanabe (ICRR, U Tokyo)

Work in progress

with M. Ibe (ICRR) and S. Shirai (IPMU)

FPWS2023 @ Atami, 2023.11.24

Today's goal

- Flavor symmetries (e.g. Froggatt-Nielsen mechanism) can explain flavor structures
- In grand unified theories, flavor structures of quarks and leptons can be understood uniformly
- Flavor symmetries can be verified using proton decay

Contents

- 1. Flavor structure and Grand Unified Theory (GUT)**
- 2. Supersymmetry (SUSY)**
- 3. Summary**

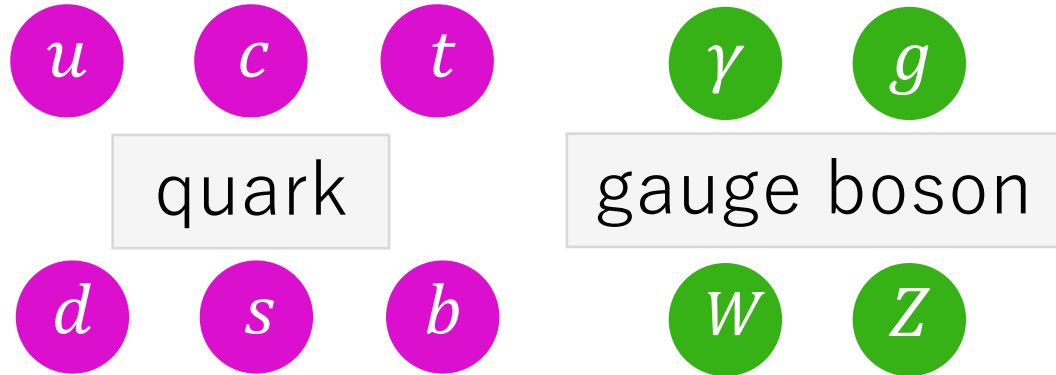

Contents

**1. Flavor structure and
Grand Unified Theory (GUT)**

2. Supersymmetry (SUSY)

3. Summary

The standard model(SM)

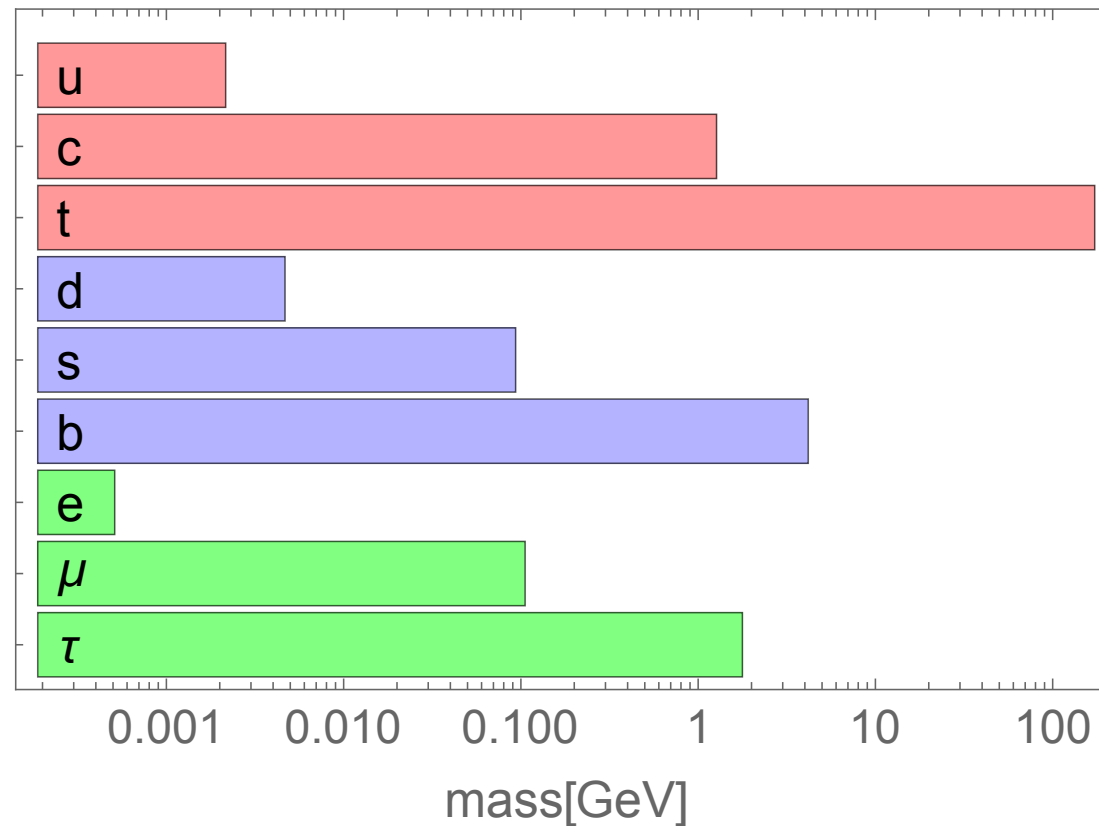

- Very successful
- Repetitive structure of quarks and leptons

Situation

There exist flavor puzzles in the SM !

Fermion mass structure

There is hierarchical mass structure.

Structure of mixings

$$|V_{\text{CKM}}| = \left(\begin{array}{ccc} \text{large} & \text{small} & \text{very small} \\ \text{small} & \text{large} & \text{small} \\ \text{very small} & \text{small} & \text{large} \end{array} \right) \quad \text{hierarchical}$$
$$|V_{\text{PMNS}}| = \left(\begin{array}{ccc} \text{large} & \text{large} & \text{small} \\ \text{large} & \text{large} & \text{large} \\ \text{large} & \text{large} & \text{large} \end{array} \right) \quad \text{anarchical}$$

Mixing matrices have distinctive structures.

Froggatt-Nielsen (FN) mechanism

C.D.Froggatt and H.B.Nielsen, Nucl,Phys.B 147 (1979)

- Consider new U(1) symmetry

$$f_i : q(f_i), \quad (i: \text{generation})$$

- We cannot write ordinary Yukawa interactions

$$\cancel{f_i f_j H}$$

- If we introduce new scalar $S : -1$,

$$\kappa_{ij} f_i f_j H \times \left(\frac{S}{M_{\text{Pl}}} \right)^{|q(f_i)+q(f_j)|}, \quad \kappa_{ij} = O(1)$$

FN mechanism

- If S obtains VEV,

$$\kappa_{ij} f_i f_j H \times \left(\frac{\langle S \rangle}{M_{\text{Pl}}} \right)^{|q(f_i)+q(f_j)|} = \kappa_{ij} f_i f_j H \times \epsilon^{|q(f_i)+q(f_j)|},$$

$$y_{ij} = \kappa_{ij} \times \epsilon^{|q(f_i)+q(f_j)|}, \quad \epsilon = \langle S \rangle / M_{\text{Pl}} < 1$$

- **Flavor structure is realized naturally.**

SU(5) Grand Unified Theory (GUT)

- matter unification

$$Q_L = \begin{pmatrix} u_L \\ d_L \end{pmatrix}, \quad L_L = \begin{pmatrix} \nu_L \\ e_L \end{pmatrix}, \quad u_R^c, \quad d_R^c, \quad e_R^c$$

$$\bar{5} = \begin{pmatrix} d_R^c \\ d_G^c \\ d_B^c \\ e \\ -\nu \end{pmatrix}, \quad 10 = \begin{pmatrix} 0 & u_B^c & -u_G^c & u_R & d_R \\ -u_B^c & 0 & u_R^c & u_G & d_G \\ u_G^c & -u_R^c & 0 & u_B & d_B \\ -u_R & -u_G & -u_B & 0 & e^c \\ -d_R & -d_G & -d_B & -e^c & 0 \end{pmatrix}$$

SU(5) Grand Unified Theory (GUT)

- fermion

$$\bar{5} = \begin{pmatrix} d_{\mathbf{R}}^c \\ d_{\mathbf{G}}^c \\ d_{\mathbf{B}}^c \\ e \\ -\nu \end{pmatrix}, \quad 10 = \begin{pmatrix} 0 & u_{\mathbf{B}}^c & -u_{\mathbf{G}}^c & u_{\mathbf{R}} & d_{\mathbf{R}} \\ -u_{\mathbf{B}}^c & 0 & u_{\mathbf{R}}^c & u_{\mathbf{G}} & d_{\mathbf{G}} \\ u_{\mathbf{G}}^c & -u_{\mathbf{R}}^c & 0 & u_{\mathbf{B}} & d_{\mathbf{B}} \\ -u_{\mathbf{R}} & -u_{\mathbf{G}} & -u_{\mathbf{B}} & 0 & e^c \\ -d_{\mathbf{R}} & -d_{\mathbf{G}} & -d_{\mathbf{B}} & -e^c & 0 \end{pmatrix},$$

- scalar

$$H = \begin{pmatrix} H^+ \\ H^0 \end{pmatrix} \quad \longrightarrow \quad H_5 = \begin{pmatrix} H_{\mathbf{R}} \\ H_{\mathbf{G}} \\ H_{\mathbf{B}} \\ H^+ \\ H^0 \end{pmatrix}$$

SU(5) Grand Unified Theory (GUT)

$$\bar{5} = \begin{pmatrix} d_{\mathbf{R}}^c \\ d_{\mathbf{G}}^c \\ d_{\mathbf{B}}^c \\ e \\ -\nu \end{pmatrix}, \quad 10 = \begin{pmatrix} 0 & u_{\mathbf{B}}^c & -u_{\mathbf{G}}^c & u_{\mathbf{R}} & d_{\mathbf{R}} \\ -u_{\mathbf{B}}^c & 0 & u_{\mathbf{R}}^c & u_{\mathbf{G}} & d_{\mathbf{G}} \\ u_{\mathbf{G}}^c & -u_{\mathbf{R}}^c & 0 & u_{\mathbf{B}} & d_{\mathbf{B}} \\ -u_{\mathbf{R}} & -u_{\mathbf{G}} & -u_{\mathbf{B}} & 0 & e^c \\ -d_{\mathbf{R}} & -d_{\mathbf{G}} & -d_{\mathbf{B}} & -e^c & 0 \end{pmatrix}, \quad H_5 = \begin{pmatrix} H_{\mathbf{R}} \\ H_{\mathbf{G}} \\ H_{\mathbf{B}} \\ H^+ \\ H^0 \end{pmatrix}$$

Proton decay !

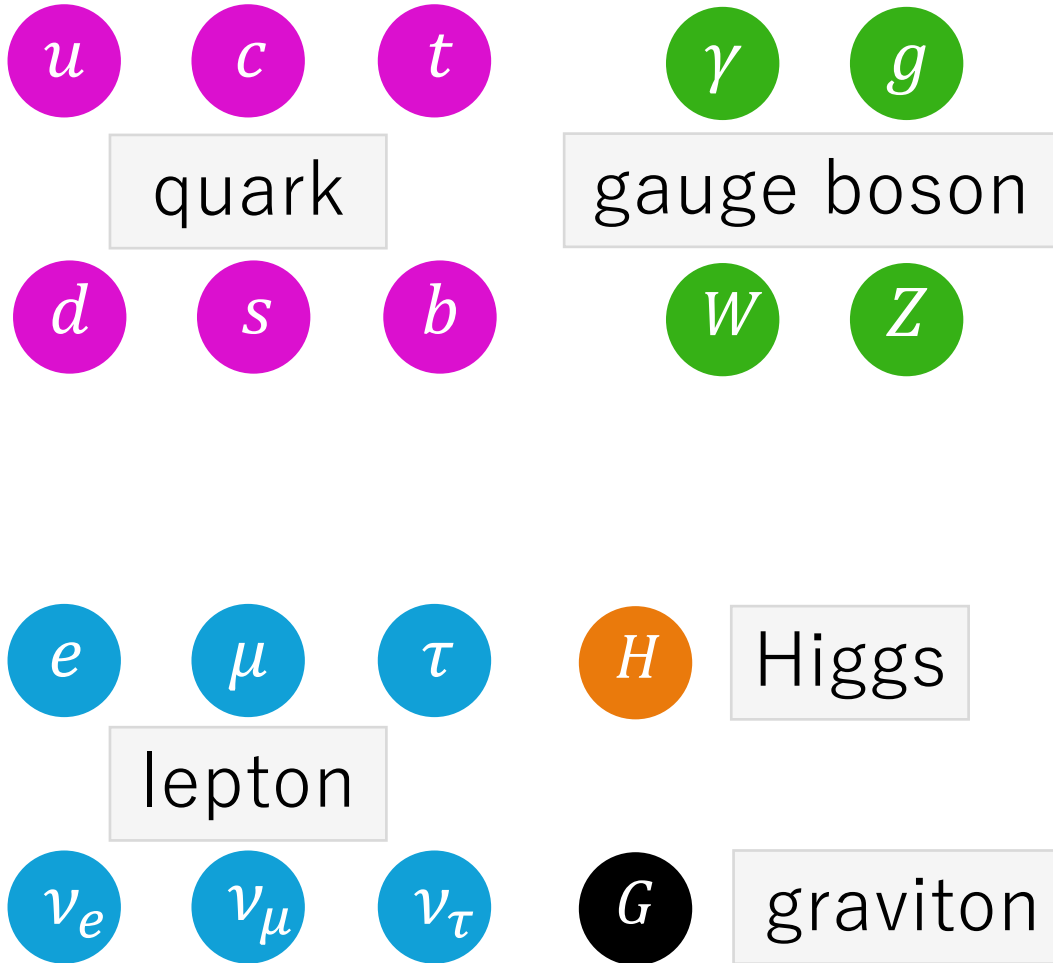

Contents

High-scale SUSY

High-scale SUSY

Flavor effect

- fermion mass terms

$$y_{ij} \langle H \rangle \times \bar{f}_i f_j \quad \longrightarrow \quad f_i \longrightarrow f_k$$

- sfermion mass terms

$$m_{ij}^2 \times \tilde{f}_i^\dagger \tilde{f}_j \quad \longrightarrow \quad \tilde{f}_i \longrightarrow \tilde{f}_k$$

Proton decay in SUSY GUT

Proton decay in SUSY GUT

We focus on SUSY GUT with FN mechanism.

FN mechanism + SUSY GUT

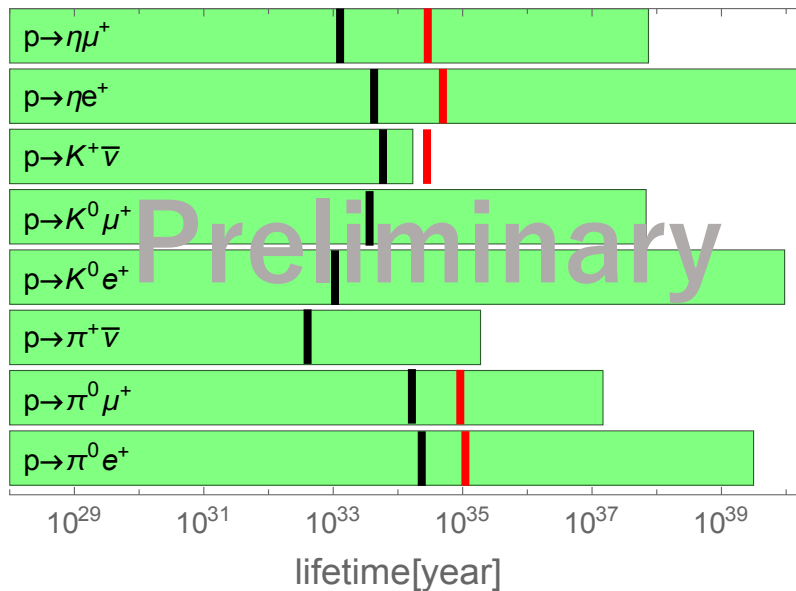

- sfermion mass structure

$$\left| m_{\tilde{Q}_L, \tilde{u}_R, \tilde{e}_R}^2 \right| \sim \left[\begin{array}{ccc} \text{large} & \text{small} & \text{very small} \\ \text{small} & \text{large} & \text{small} \\ \text{very small} & \text{small} & \text{large} \end{array} \right]$$

$$\left| m_{\tilde{L}_L, \tilde{d}_R}^2 \right| \sim \left[\begin{array}{ccc} \text{large} & \text{large} & \text{small} \\ \text{large} & \text{large} & \text{large} \\ \text{large} & \text{large} & \text{large} \end{array} \right]$$

Results: $10 \ni (Q_L, u_R^c, e_R^c)$

$$q(10) = (3, 2, 0)$$

$$(4, 2, 0)$$

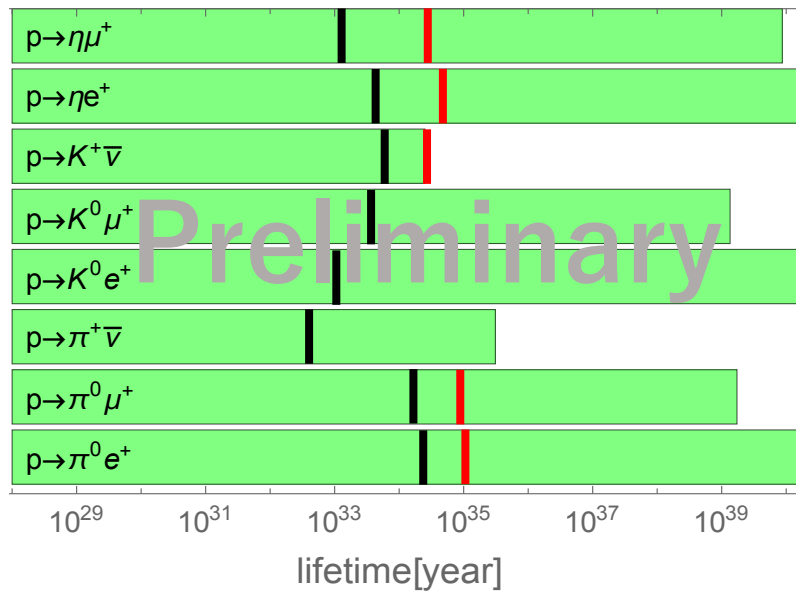

$$(5, 2, 0)$$

Results: $\bar{5} \ni (d_R^c, L_L)$

$$q(\bar{5}) = (4, 4, 3)$$

$$(4, 3, 3)$$

$$(3, 3, 3)$$
