arxiv:1808.02031

## FREEZING-IN THE HIERARCHY PROBLEM

# FREEZE-IN DARK MATTER

INITIAL CONDITIONS:  $Y_{DM} \equiv \frac{n_{DM}}{s} = 0$

OBSERVATION  
 $m_{SM} \gtrsim m_{DM} \approx v$

$$\lambda \sim \frac{v}{M_{Pl}}$$

$$\sim \frac{1}{\sqrt{N}}$$

TEMPTING  
SPECULATION

# GRAVITY

$$\sim \frac{E^2}{M_{\text{Pl}}^2}$$

$$\sim \frac{N E^4}{(4\pi)^2 M_{\text{Pl}}^4}$$

$$\Lambda_{\text{UV}} \sim 4\pi \frac{M_{\text{Pl}}}{\sqrt{N}}$$

$$\sim \text{TeV}$$

SOLUTION TO THE HP

arXiv:0706.2050

arXiv:0710.4344

# LARGE N BASICS

$$\lambda |H|^2 \sum_{i=1}^N \phi_i^2$$

$\phi_i$

$$\lambda \sim \frac{1}{N}$$

$$r \sim \lambda^V N^{L_\phi} = (\lambda N)^V N^{-P+n}$$

$$P \geq n$$

# N DARK MATTER SPECIES

$$\lambda |H|^2 \sum_{i=1}^N \phi_i^2$$

$$Y_{DM} = \sum_{i=1}^N Y_i \approx N \lambda^2 \frac{M_{\text{Pl}}}{m_{\text{SM}}}$$

$$\lambda \sim \frac{1}{N}$$

$$N \sim \frac{M_{\text{Pl}}^2}{v^2}$$

NO HIERARCHY PROBLEM  
(BUT MANY OTHER ISSUES)

# PARAMETRICS OF FREEZE-IN

$$\Gamma \equiv \Gamma(\text{SM} \rightarrow \text{DM DM})$$

$$\frac{dY_{\text{DM}}}{dt} \approx \Gamma Y_{\text{SM}} \quad \longrightarrow \quad Y_{\text{DM}} \approx \frac{\Gamma Y_{\text{SM}}}{H(m_{\text{SM}})} \approx \lambda^2 \frac{M_{\text{Pl}}}{m_{\text{SM}}}$$

$$m_{\text{DM}} Y_{\text{DM}} = \frac{\rho_{\text{DM}}}{s_0} \approx T_{\text{EQ}} \sim \frac{v^2}{M_{\text{Pl}}} \quad \longrightarrow \quad \lambda \sim \frac{v}{M_{\text{Pl}}} \sqrt{\frac{m_{\text{SM}}}{m_{\text{DM}}}}$$

$$m_{\text{DM}} \leftrightarrow \Lambda_{\text{UV}}$$

# SCALAR PHENOMENOLOGY

# TEV CUTOFFS

$$y_\psi L_e H \sum_{i=1}^N \psi_i$$

1.  $r \sim y_\psi^V N^{I_\psi} = (y_\psi^2 N)^V N^{-E_\psi} \longrightarrow y_\psi \lesssim \frac{1}{\sqrt{N}}$
2.  $\Gamma(W \rightarrow e\psi) \sim \frac{y_\psi^2 v^3}{m_\psi^2} \longrightarrow m_{\text{DM}} Y_{\text{DM}} \sim \frac{1}{m_{\text{DM}}}$

# FERMION PHENOMENOLOGY

# A DISTRIBUTION OF MASSES

FOR ILLUSTRATIVE PURPOSES I HAVE TAKEN ALL N MASSES TO BE EQUAL

$$\frac{d\rho_{\text{DM}}}{dm} \sim$$

...

# A DISTRIBUTION OF MASSES

CONTINUOUS ENERGY INJECTION THROUGHOUT THE HISTORY OF THE  
UNIVERSE

$$\frac{d\rho_{\text{DM}}}{d\tau} = \frac{d\rho_{\text{DM}}}{dm} \left| \frac{d\tau}{dm} \right|$$

PHENOMENOLOGY SIMILAR TO  
DYNAMICAL DARK MATTER

arXiv:1106.4546

arXiv:1107.0721

# SUMMARY & SMOKING GUNS

- NEW CONNECTION BETWEEN DARK MATTER AND THE HIERARCHY PROBLEM (ANOTHER FACE OF THE “WIMP MIRACLE”). FOR OTHER “FLAVORS” OF LARGE-N DM SEE: 0903.0660 AND 1607.06821
- RATHER UNIQUE SIGNATURES: DARK MATTER IS VERY WEAKLY COUPLED TO US, BUT IT CAN BE PRODUCED AT COLLIDERS THROUGH ITS GRAVITATIONAL INTERACTIONS. ITS FREEZE-IN COUPLING MIGHT BE PROBED IN INDIRECT DETECTION
- IF WE ALLOW FOR A DISTRIBUTION OF MASSES WE GET A NEW CHARACTERISTIC SIGNAL: ENERGY INJECTION THROUGHOUT THE HISTORY OF THE UNIVERSE

## FREEZING-IN THE HIERARCHY PROBLEM

WHY HAVE WE SEEN  
NOTHING SO FAR?

EXPLANATION #1:  
THERE IS NOTHING TO SEE

# It's a Match!

You and Allison have liked each other.

## EXPLANATION #2:

## THERE ARE TOO MANY NEW PARTICLES

# LARGE N CONSEQUENCES

OUT OF REACH

$$\sigma \sim \frac{1}{N}$$

# LARGE N CONSEQUENCES

INCREASING MASS

LONG DECAY CHAIN,  
LOW PT FINAL OBJECTS,  
LOW VISIBLE ENERGY

=

MISSED BY CURRENT  
TRIGGERS

SHORT DECAY CHAIN,  
SMALL MASS

=

TOO MUCH  
BACKGROUND OR  
“UNTRIGGERABLE”

# TODAY'S MODEL

$$\mathcal{L} \supset \frac{1}{2}(\partial_\mu \phi_\alpha)^2 - \frac{m_\alpha^2}{2}\phi_\alpha^2 - a_{\alpha\beta\gamma}\phi_\alpha\phi_\beta\phi_\gamma - \lambda_{\alpha\beta\gamma\delta}\phi_\alpha\phi_\beta\phi_\gamma\phi_\delta$$

SMALL LOW ENERGY SECTOR OF THE LANDSCAPE EXPANDED AROUND  
A MINIMUM

(TUNED MODULI, GOLDSTONES ASSOCIATED TO THE POSITION OF BRANES, (PSEUDO)  
SCALARS FROM HIGHER FORMS IN STRING THEORY, ...)

---

$$\mathcal{L}_\psi \supset i\psi_\alpha^\dagger \bar{\sigma}^\mu \partial_\mu \psi_\alpha - m_\alpha \psi_\alpha^\dagger \psi_\alpha - y_{\alpha\beta} \psi_\alpha^\dagger \psi_\beta \phi + \text{h.c.}$$

LOW ENERGY REMNANTS OF COMPACTIFICATIONS  
(FROM STRINGS ENDING ON BRANE STACKS FOR EXAMPLE)

# CONCRETE MODELS

$$\mathcal{L} \supset \frac{1}{2}(\partial_\mu \phi_\alpha)^2 - \frac{m_\alpha^2}{2}\phi_\alpha^2 - a_{\alpha\beta\gamma}\phi_\alpha\phi_\beta\phi_\gamma - \lambda_{\alpha\beta\gamma\delta}\phi_\alpha\phi_\beta\phi_\gamma\phi_\delta$$

LOW ENERGY SECTOR OF THE LANDSCAPE EXPANDED AROUND A MINIMUM

$$\mathcal{L}_{\phi H} \supset -a_\alpha^{\text{SM}}\phi_\alpha|H|^2 - \lambda_{\alpha\beta}^{\text{SM}}\phi_\alpha\phi_\beta|H|^2$$

WITH SMALL COUPLINGS TO THE SM

$$a^{SM} \ll a$$

# PARTICLE MULTIPLICITIES

$$N_{\text{tot}} = b, c, \mu, s, W, Z, g, \gamma, \phi_N$$

$$a_{\alpha\beta\gamma} = a_{\alpha}^{\text{SM}} = 0 \quad m_{\alpha} \in [100, 600]$$

N.B. ALMOST ONLY JETS AND B-JETS  
(EVENTS WITH TAU'S AND W'S <10%)

# FINAL STATE ENERGIES

AVERAGE VISIBLE ENERGY  
PER PARTICLE

TOTAL VISIBLE ENERGY  
IN THE EVENT

N.B. THERE ARE ALWAYS TWO INVISIBLE PARTICLES

$$a_{\alpha\beta\gamma} = a_{\alpha}^{\text{SM}} = 0$$

# PARTICLE MULTIPLICITIES

$$N_{\text{tot}} = b, c, \mu, s, W, Z, g, \gamma$$

$$a_{\alpha\beta\gamma} = 0 \quad a_{\alpha}^{\text{SM}} \neq 0 \quad a_{\alpha}^{\text{SM}} \ll \lambda_{\alpha\beta}^{\text{SM}} v$$

# FINAL STATE ENERGIES

AVERAGE VISIBLE ENERGY  
PER PARTICLE

TOTAL VISIBLE ENERGY  
IN THE EVENT

# FINAL STATE ENERGIES

AVERAGE VISIBLE ENERGY PER PARTICLE  
HIGH MULTIPLICITY EVENTS

# ASIDE ON DISORDER

# DISORDER IN THE MASS MATRIX

WE FOCUS ON A REASONABLE POSSIBILITY INSPIRED BY THE CENTRAL LIMIT THEOREM. MANY PHENO EXPLORATIONS ARE POSSIBLE!

REAL AND SYMMETRIC  $N \times N$

$$\begin{pmatrix} \omega_{11} & \omega_{12} & \dots & \dots \\ \omega_{21} & \omega_{22} & \dots & \dots \\ \dots & \dots & \omega_{33} & \dots \\ & & & \dots \end{pmatrix}$$

$$p(\omega) \propto e^{-(\omega - \mu)^2 / 2\sigma^2}$$

$$\omega_{ij} = \omega_{ji}$$

EIGENVALUES

# COMBINATORICS AND PLANARITY

AVERAGE OVER DISORDER = PATH INTEGRAL IN A MATRIX MODEL (MANY ANALOGIES WITH SYK)

$$\langle (M^{2n})^i_j \rangle = \frac{1}{Z} \int DM e^{-\frac{N}{2} \text{Tr}[M^2]} (M^{2n})^i_j$$

LARGE-N = PLANAR DIAGRAMS

$$\int_{-2}^2 dm \frac{1}{2\pi} \sqrt{4 - m^2} m^{2n} = C_n = \frac{(2n)!}{(n+1)!n!}$$

CATALAN NUMBERS: REMARKABLE COMBINATORIAL PROPERTIES, THEY ALSO COUNT OUR DECAY CHAINS!

# OUTLOOK

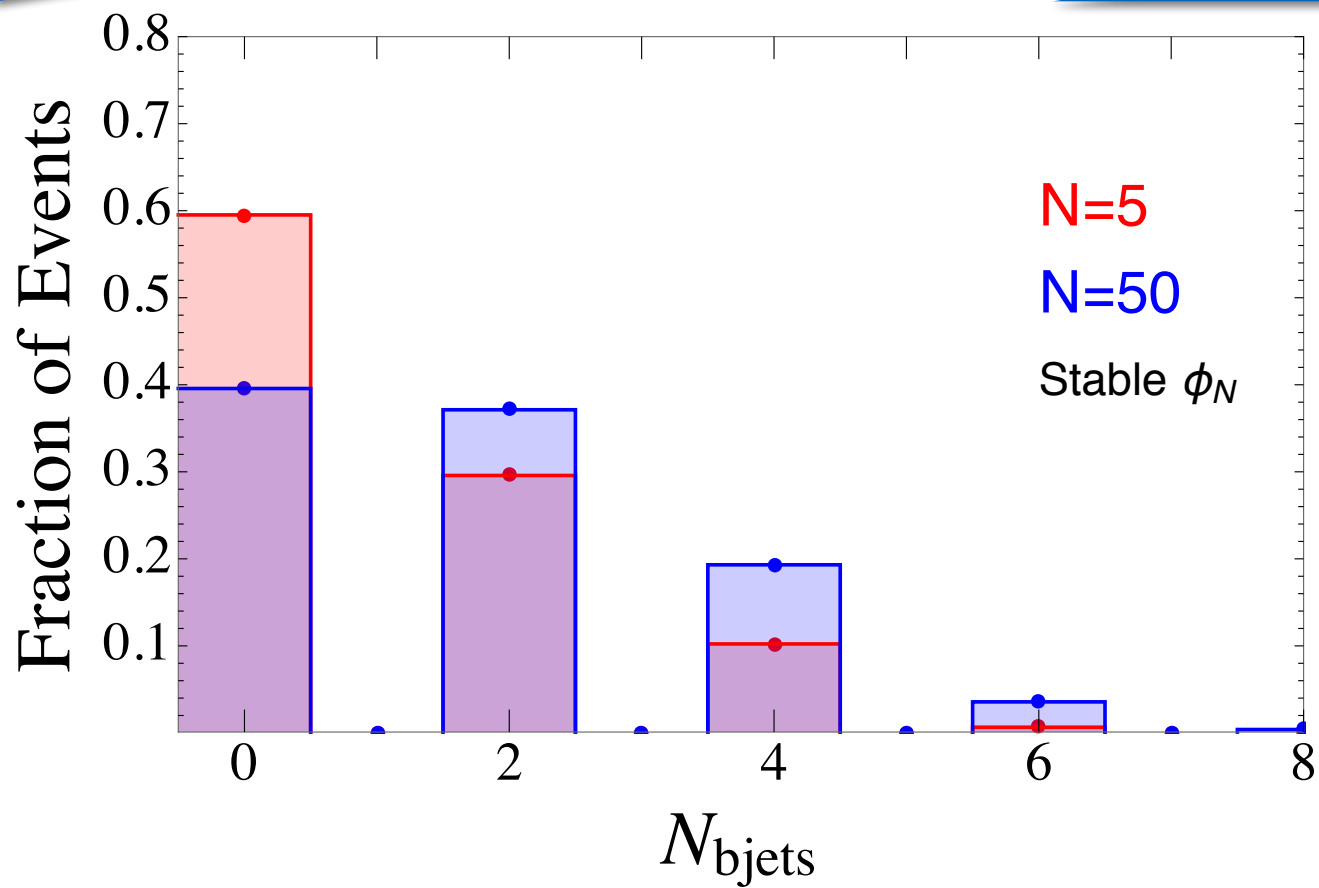

- NEW SECTORS WITH MANY NEW PARTICLES ARE A REALISTIC POSSIBILITY WITH A PLAUSIBLE TOP-DOWN MOTIVATION FROM THEORIES WITH EXTRA DIMENSIONS, INCLUDING STRING THEORY
- A LARGE NUMBER OF NEW PARTICLES DOES NOT NECESSARILY MAKE NEW PHYSICS EASIER TO DETECT, ESPECIALLY GIVEN THE CURRENT BIAS IN THE TRIGGER TABLES TOWARDS HIGH ENERGY EVENTS
- DISORDER AND HIGH MULTIPLICITIES HAVE NOT BEEN EXPLORED MUCH AT THE WEAK SCALE, BUT THEY CAN GIVE RISE TO INTERESTING NEW PHENOMENA (MAYBE A WAY TOWARDS ANSWERING THE QUESTIONS THAT WE TRULY CARE ABOUT?)

# PAIR PRODUCTION CROSS SECTION

# FINAL STATE PARTICLES

# PARTICLE MULTIPLICITIES

$$N_{\text{tot}} = b, \tau, c, \mu, s, W, Z, g, \gamma$$

$$m_\alpha \in [100, 600]$$

# FINAL STATE PARTICLES
