

Junya Yoshida (Advanced Science Research Center, JAEA)  
On behalf of J-PARC E07 Collaboration

One of the main roles of J-PARC Hadron facility is  
**to explore the S=-2 world**  
with a high intensity K- beam

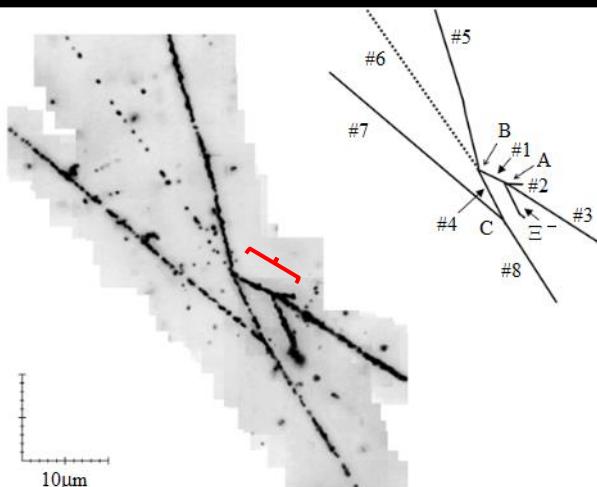

# Hybrid emulsion method

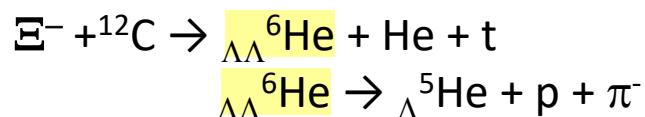

- Tagging  $\Xi^-$  production by  $K^+$  spectrometer
- Tracking the  $\Xi^-$  with SSD-tracker
- Detecting the  $\Xi^-$  track in the 1<sup>st</sup> emulsion sheet
- Detecting double hypernucleus at the endpoint of  $\Xi^-$  track

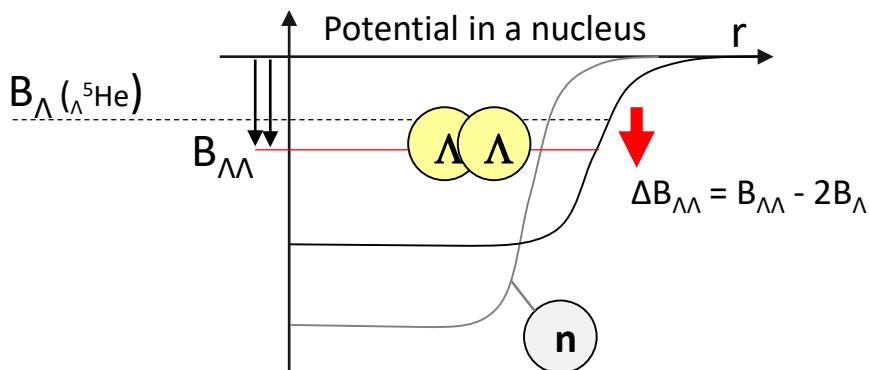

## NAGARA, $\Lambda\Lambda$ hypernucleus (2001)

## Found event list (2019 Aug.)

	KEK-PS E373	J-PARC E07
Event search	~7 years	18 months (2018 Apr. – 2019 Sep.)
S=-2 system	9	31

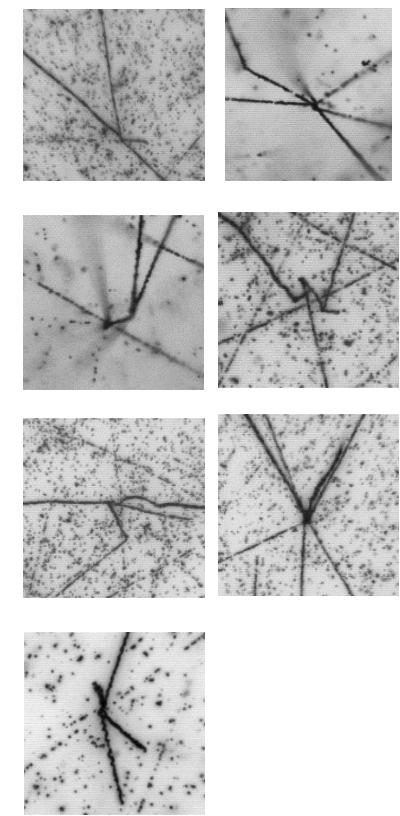

12 double Lambda events

12 twin events

7 others

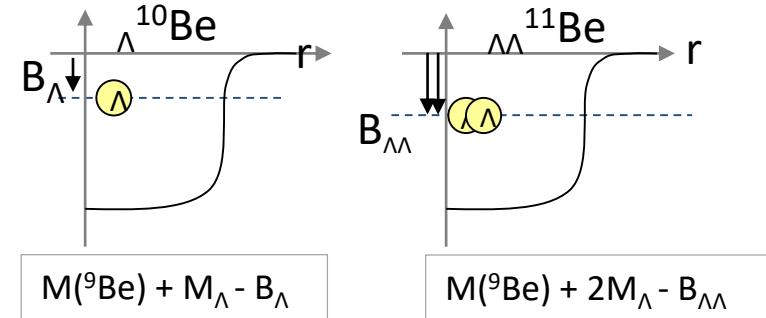

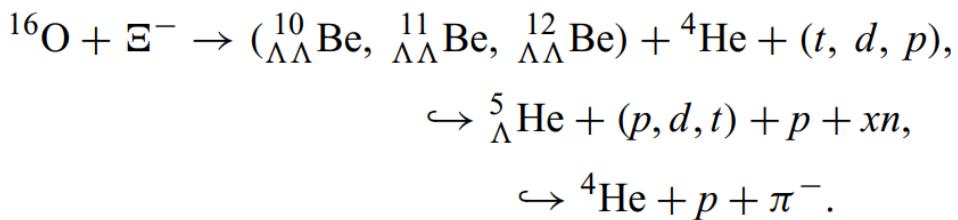

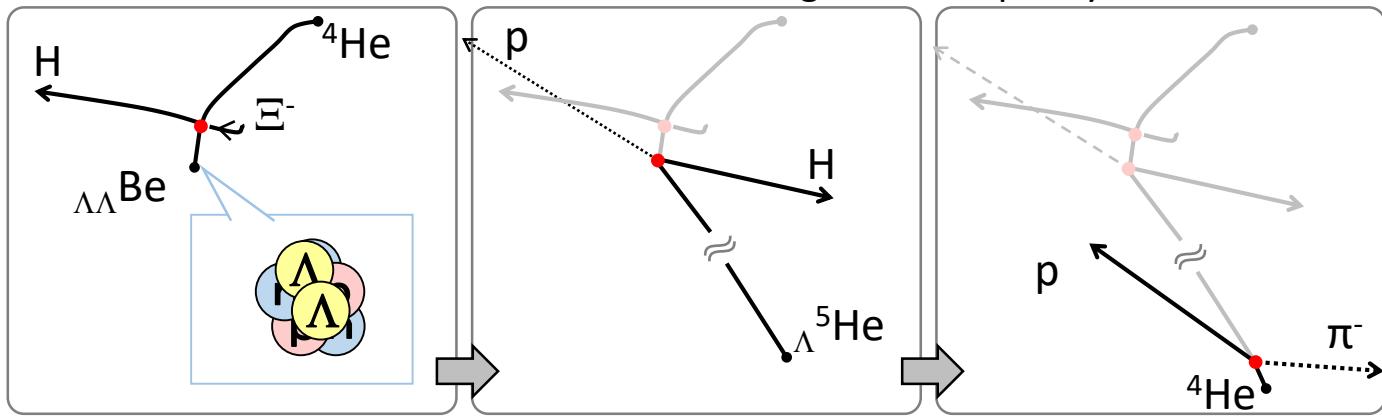

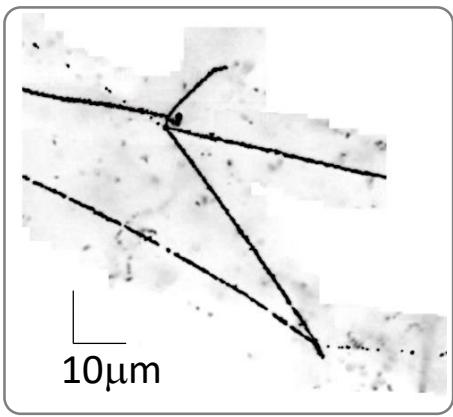

New events are being accumulated successfully and rapidly.

# MINO event

Mod#069 pl07  
ID : 22381499289376

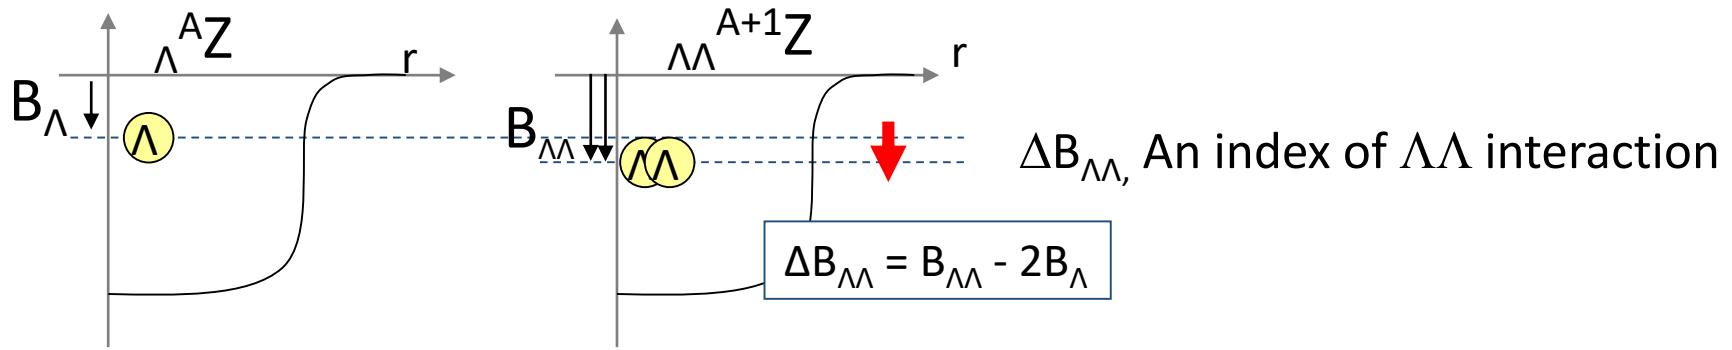

H. Ekawa et al.,  
Prog. Theor. Exp. Phys. 2019, 021D02

Possible interpretations	$B_{\Lambda\Lambda}$ [MeV]	kinematic fitting $\chi^2$ (DOF=3)
$\Xi^- + {}^{16}\text{O} \rightarrow \Lambda\Lambda\text{Be} + {}^4\text{He} + t$	15.05 +- 0.11	11.5
$\Xi^- + {}^{16}\text{O} \rightarrow \Lambda\Lambda\text{Be} + {}^4\text{He} + d$	19.07 +- 0.11	7.3
$\Xi^- + {}^{16}\text{O} \rightarrow \Lambda\Lambda\text{Be}^* + {}^4\text{He} + p$	13.68 +- 0.11 + $E_{ex}$	11.3

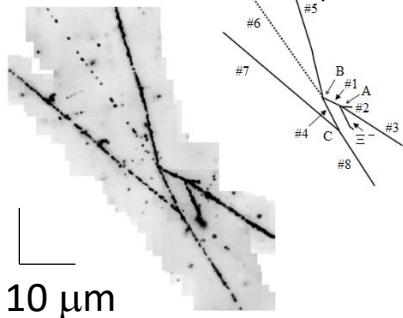

- $\Lambda\Lambda\text{Be}$  is the most probable in term of kinematic analysis.

# On $\Lambda\Lambda$ interaction

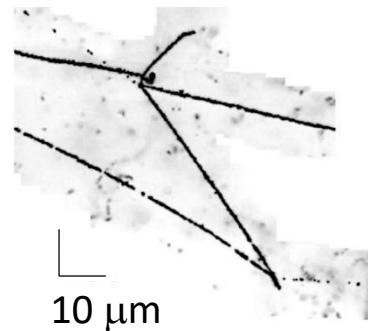

## NAGARA Event (2001)

PHYSICAL REVIEW C 88, 014003 (2013)

## MINO Event (2019)

Prog. Theor. Exp. Phys. 2019, 021D02

$\Delta B_{\Lambda\Lambda} [\text{MeV}]$

$\Lambda\Lambda^6\text{He}$      $0.67 \pm 0.17$

where,  $B_{\Xi^-} = 0.13 \text{ MeV}$

$\Delta B_{\Lambda\Lambda} [\text{MeV}]$

$\Lambda\Lambda^{11}\text{Be}$      $1.87 \pm 0.37$

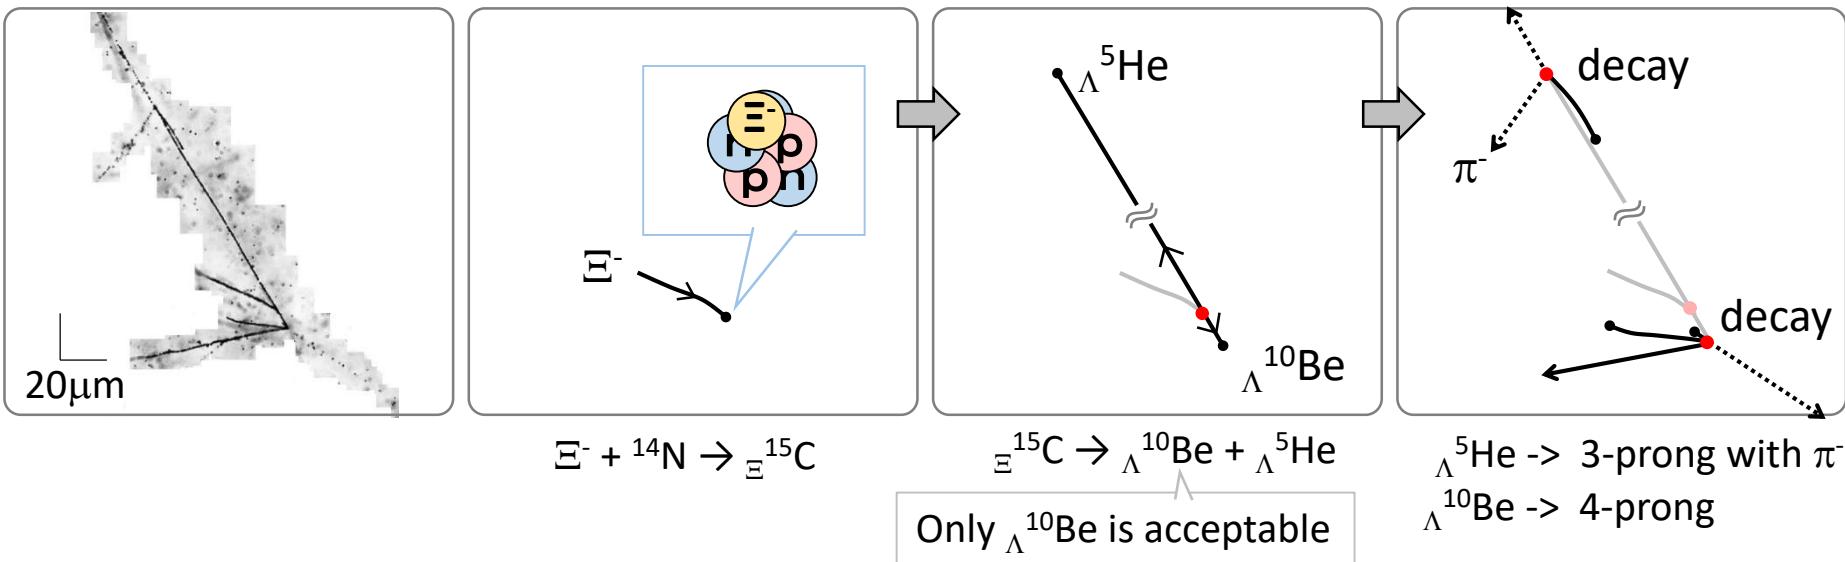

where,  $B_{\Xi^-} = 0.23 \text{ MeV}$

- $\Lambda\Lambda$  interaction is weak attractive force.
- New information on  $\Lambda\Lambda$  interaction in nuclide.

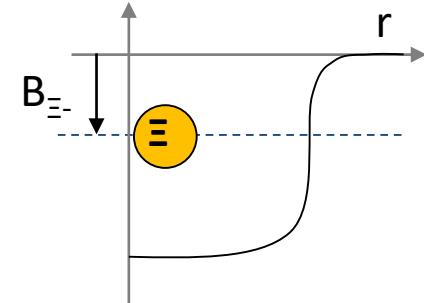

# IBUKI event

Mod#047 pl10  
ID : 20864938633496

S. H. Hayakawa, Ph.D. Thesis, Osaka Univ. (2019)

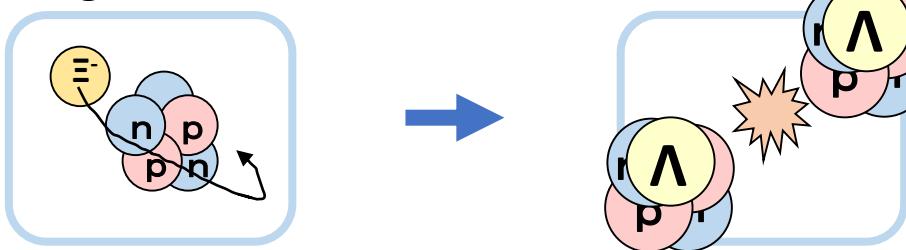

- This event is the 2<sup>nd</sup> candidate of  $\Xi$  hypernucleus.
- The mass and  $B_{\Xi^-}$  are determined precisely.
- See also poster-PN-27 by Shuhei Hayakawa.

Possible interpretation	$B_{\Xi^-}$ [MeV]	uncertainty of $B_{\Xi^-}$ [MeV]
$\Xi^- + {}^{14}\text{N} \rightarrow {}_{\Xi}{}^{15}\text{C} \rightarrow \Lambda + {}^5\text{He}$	1.27	0.21

Furthermore, other  $\Xi$  hypernucleus candidates have been detected.

●: Uniquely identified,

○: Multiple interpretations

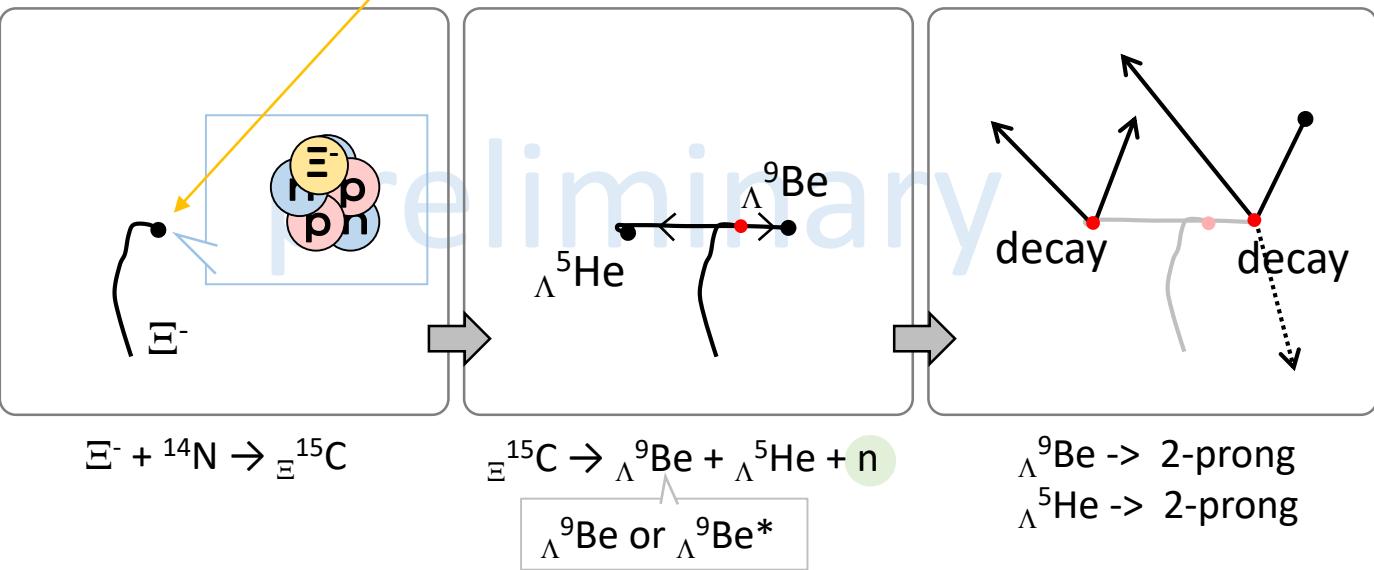

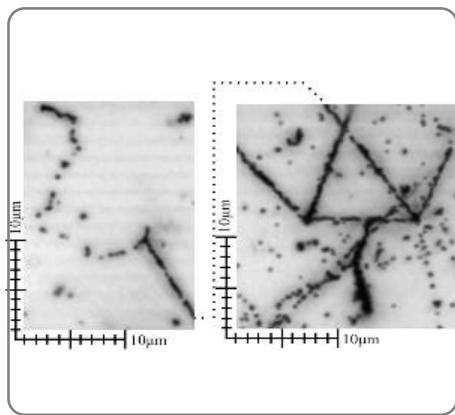

*preliminary*

Several events are identified as ( $\Xi^- + ^{14}\text{N} \rightarrow {}^{\Xi^-} \text{C} \rightarrow {}_{\Lambda} \text{Be} + {}_{\Lambda} \text{He}$ )

although  $^{14}\text{N}$  is the most dominant element in the emulsion layer.

# E373 KINKA

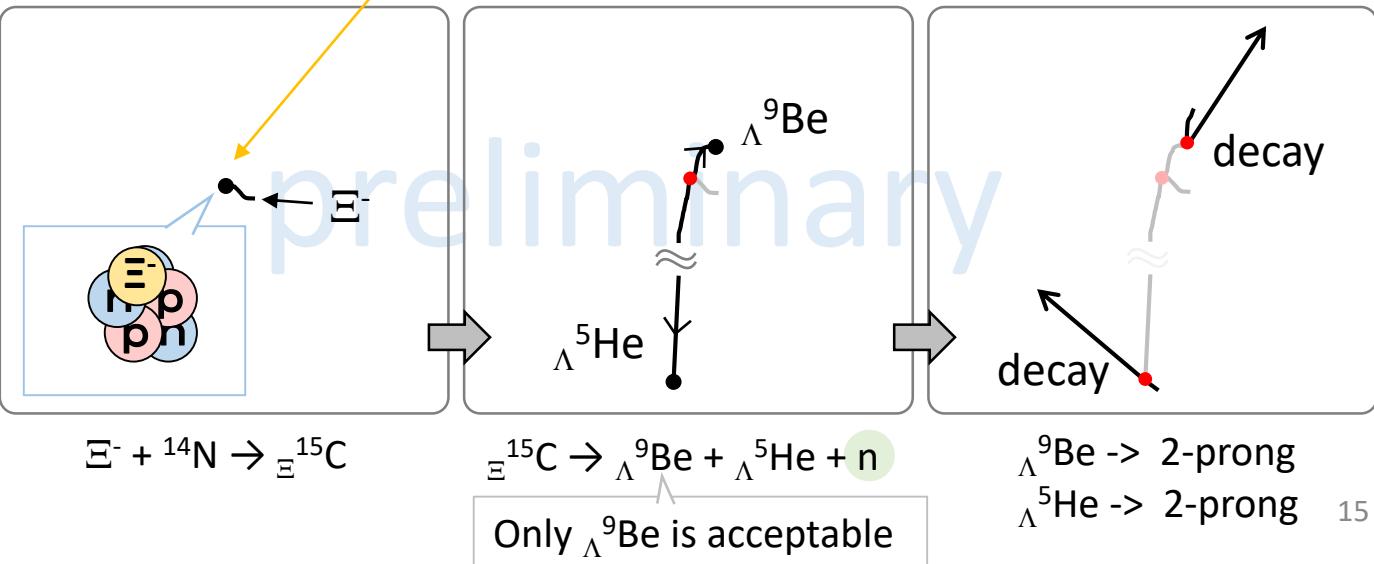

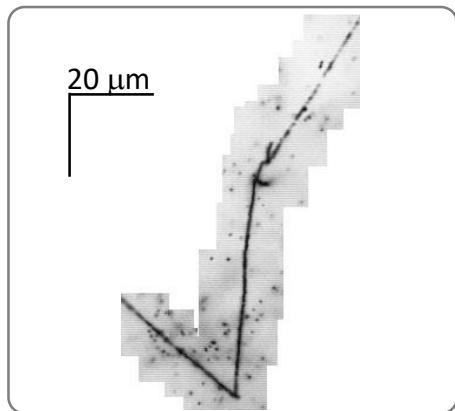

$B_{\Xi^-} \approx 5 \text{ MeV} (\Lambda^9\text{Be}^*) \text{ or } 8 \text{ MeV} (\Lambda^9\text{Be})$

[1] Prog. Theor. Phys. 105, 627 (2001)

[2] arXiv:1504.02634v1 (2015)

- Multiple candidates of  $\Xi$  hypernucleus has been detected.
- The errors for neutron emission case are under validation.
- These events suggest multiple bound states of  $\Xi^-$  in the  $\Xi^- + ^{14}\text{N}$  system.

## summary

J-PARC E07 makes a breakthrough in the study of S=-2 system.

New nuclide events and  $B_{\Lambda\Lambda}$  and  $B_{\Xi^-}$  are being accumulated by event-by-event analysis.

“MINO event” ( ${}_{\Lambda\Lambda}^{\Lambda}\text{Be}$ ): Prog. Theor. Exp. Phys. 2019, 021D02.

“IBUKI event” ( ${}_{\Xi}^{15}\text{C}$ ): Under preparation for publication

Multiple candidates of  $\Xi$  hypernucleus have been detected.

The Identification efficiency of “twin” events and the fraction of  $\Xi^- + {}^{14}\text{N} \rightarrow {}_{\Xi}^{15}\text{C}$  are high.

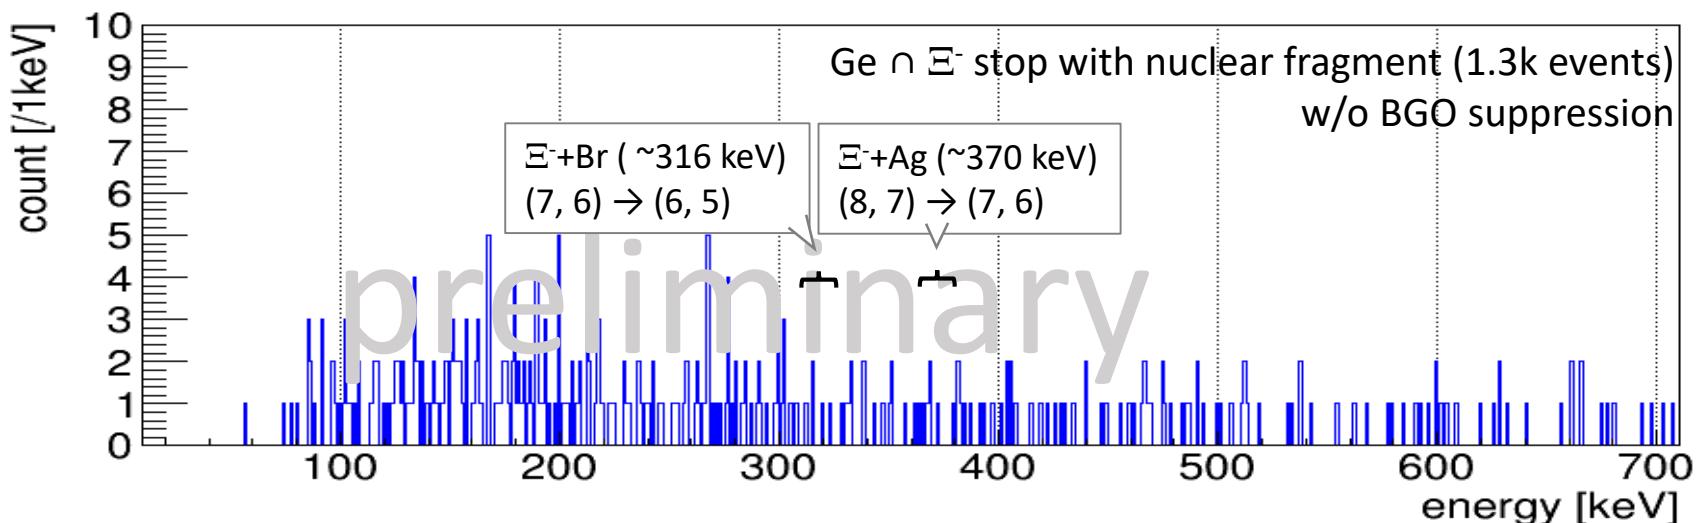

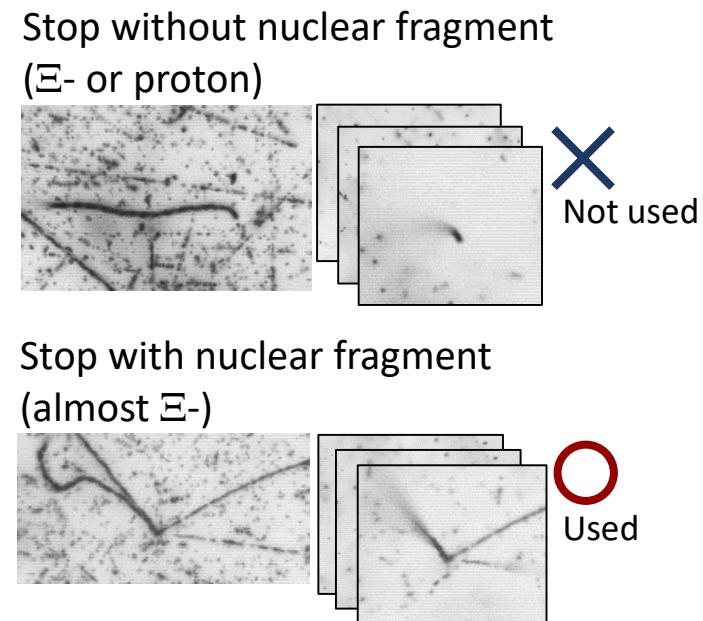

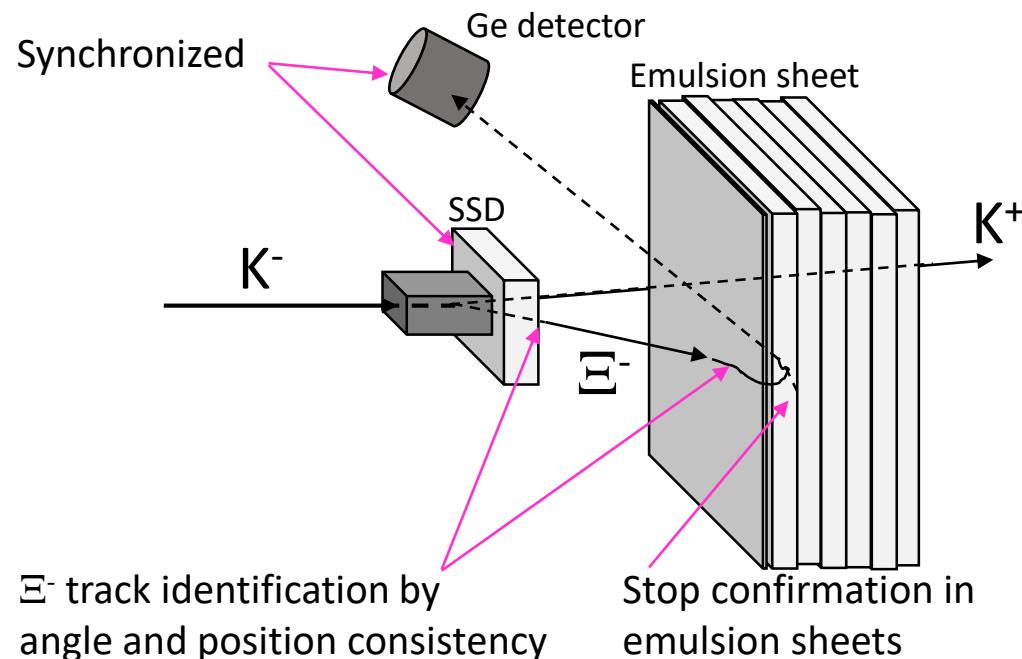

The events suggest multiple bound states (2P and 1S state?) of  $\Xi^-$  in the  $\Xi^- - {}^{14}\text{N}$ .

Event hunting is ongoing.

We will detect additional several tens events within a year.

“X-ray measurement from  $\Xi^-$  atoms” is ongoing.

# X-ray measurement from $\Xi^-$ atom with Hybrid method combined Ge detector and emulsion

The Q-value of this decay mode is the highest among any channel producing “Twin single  $\Lambda$  hypernucleus”.
